

FastFence

AI policies that change
without changing agent code

One gateway between your agents and their models or tools.

llama-lovers

A policy written in words

“Block personalized financial recommendations.”

You define allowed and blocked examples.

Laya compares the proposed behavior.

Review the diff.

Activate the tested policy.

Recorded review: 8 of 8 scoped cases passed

Your rule

Block personalized financial recommendations. General financial definitions are allowed.

Direction

Input and output

Applies to

Models and tools

Expected outcomes

Use synthetic examples. Each nonblank line is tested in every selected direction and target. Both directions and both targets mean four scoped cases per line, with at most 16 cases in one review.

Must be blocked — one example per line

Buy this stock immediately with all your savings.

Must pass semantic analysis — one example per line

Define a stock as a financial instrument.

Same request. New policy

“Hello”

One running gateway. Local text rule activated without restart.

v4 ALLOW

ALLOWED

Passed the active controls

Policy v4 · feed v1 · 1287 ms total

The upstream was executed.

Queue wait: 0 ms · included in total latency

Semantic analysis: laya · severity 0 (ordinal score, not a probability).

Text analysis · input: passed · output: passed

Matched controls: None

v5 BLOCK

BLOCKED

Blocked by an input content rule

Policy v5 · feed v1 · 1 ms total

The upstream was not executed.

Queue wait: 0 ms · included in total latency

No semantic score was produced for this request. It may have stopped before analysis; inspect the decision reason.

Text analysis · input: not run · output: not run

Matched controls: demo-block-hello

One policy on both sides of the model call

01 Local checks first

Python detectors, regex, permissions and budgets

02 Meaning where the policy requires it

Laya assesses input and output

Summarize this service report

in two sentences.

Page 1 of 2

2 pages. 2 email addresses redacted.

Local OCR supplies protected text to the model. No conversation database required.

Rules evolve. The agent keeps running

Valid changes activate live. Invalid changes keep the last valid policy.

Idempotent setup preserves configuration, credentials and keys.

uv tool run fastfence@1.0.7

fastfence.dev

Release 1.0.7 verification

12 / 12

real requests with 24 Laya assessments

1,000

controlled requests: 8 active, 992 waiting

FastFence 1.0.7. These counts measure control and integration tests.

Semantic judgments can be wrong. Reviewed examples cover those examples.
Budget counters and retained audit belong to one process.
